

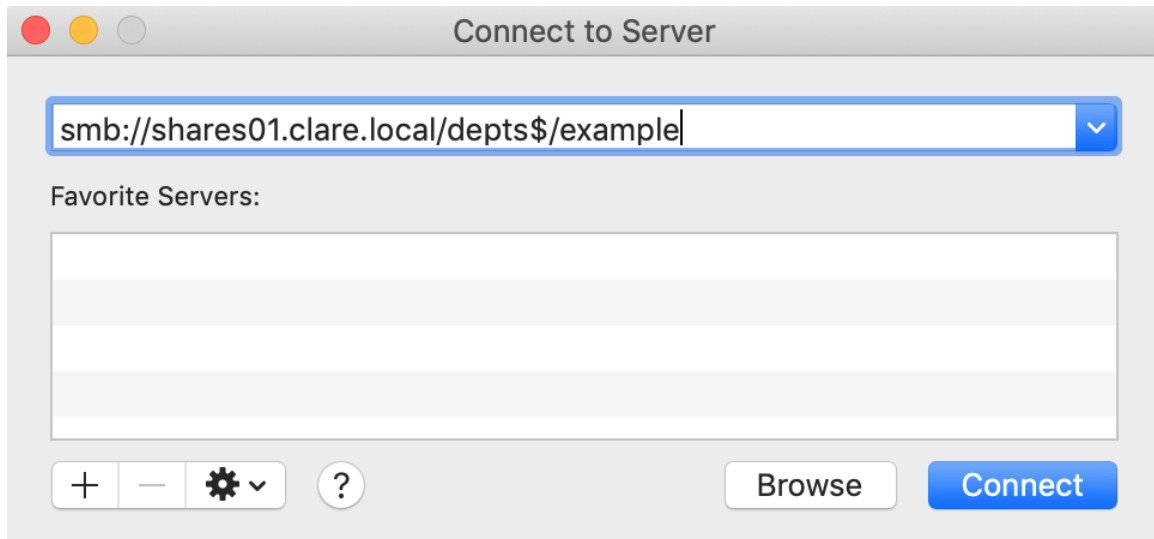

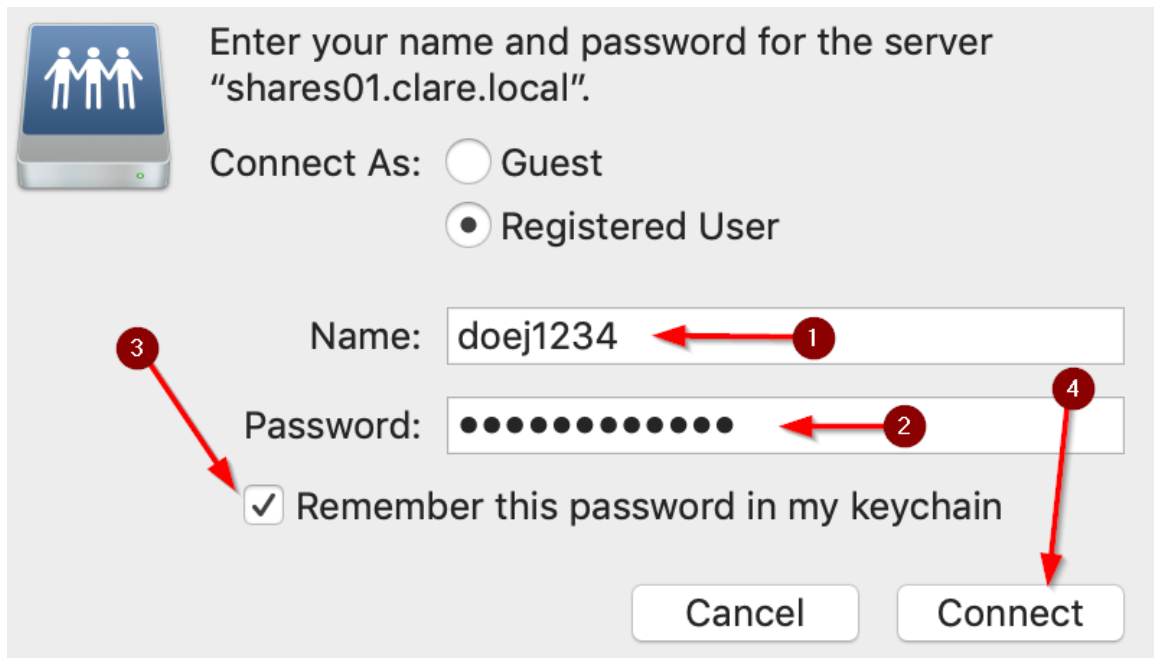

Mapping Network Drives

Mac Guide

1. Hit the shortcut “Command + K” to open Connect to Server. Enter the address of the share you wish to connect to and then click Connect. If you do not know the address for your share, ask a co-worker who has it mapped or contact the Help Desk.

2. Enter your CGU credentials, check the “Remember this password in my keychain” box, then click Connect.

3. The network drive should now be available from Locations.
